

## SUMMARY

### ***Apatova N. V., Akinyna L. N. Modeling and optimizing processes of redistribution of Crimean water resources***

One of inhibitors of economic development of Crimea is the boundedness of natural resources, first of all - water. It is not enough of own water resources of locale for sufficing its requirements. The large part of water arrives on the Northern-Crimean channel. The situation is complicated by losses in irrigation systems and nonrational water use. The network task of allocation of water resources by artificial systems is decided in our research by the set of subtasks expressed by models of a tree of decisionmaking.
